## Digital Ecosystems and Human Well-Being

The starting point is that in digital ecosystems we can find close relationships between technology and human behavior. Considering our relationship with the computer it is likely that many of those of us who work with a computer on a daily basis have never received a training course on the matter, but we, we have learned the logic of the system from our interaction with the machine and it also happens in our interaction with the digital ecosystems.

Digitization promotes profound changes in the rules of economic exchange and the intensive use of revolutionary forms of communication between human beings and between humans and technological resources linked with digital ecosystems and resources based in Artificial intelligence. In the contemporary world AI applications are growing rapidly to be applied in many areas of daily life with additional positive impacts on society. to enhance scientific knowledge and to provide well-being in the everyday life,

Scientific evidence and cases are presented to explain the nature and results of the impact of digital ecosystem on human well-being
